

## STRIP DOOR KIT ASSEMBLY INSTRUCTIONS

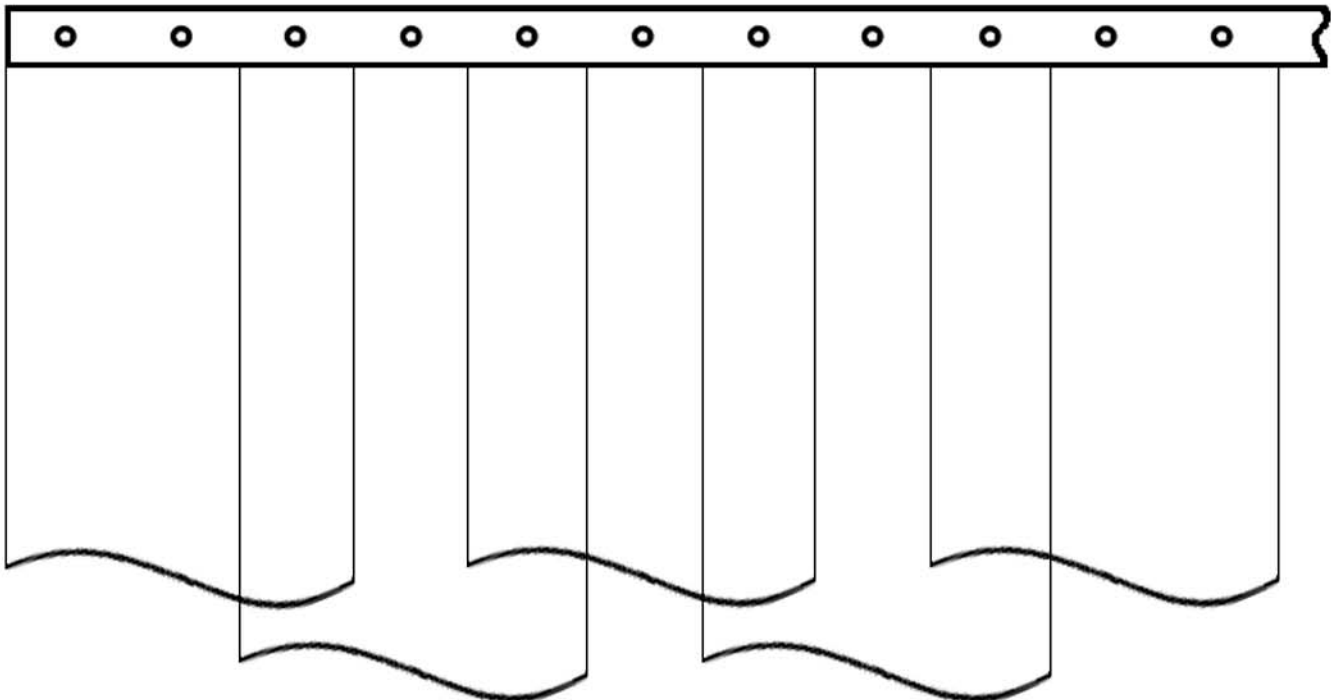

### Tools Needed

Pen or Pencil to mark drill holes.  
Drill for attaching hardware to surface  
5/16" Diameter Fasteners  
Step Stool or Ladder  
Utility Knife to cut strips.

### IMPORTANT

Prior to installation, unroll all door strips and place them on a clean, flat surface in a warm temperature for a minimum of 1 day. This will allow the strips to return to their original form.

1. Mount the universal steel hardware to either the under header or wall position using appropriate fasteners supplied by others or yourself. We recommend 5/16" diameter screws.
2. Attach strip numbers 1 and 3 with concave side toward you, leaving desired spacing between strips as indicated by the diagram on reverse side of this sheet. Attach strip number 2 with the concave side away from you over strip numbers 1 and 3.
3. Attach all remaining door strips in the same manner as in Step 2 making sure that the concave sides face each other.
4. Once all of the door strips have been attached, mount the fastening plate over the strips and screw the nuts (supplied) onto the pegs to hold them in place. Please note: The curved edge of the fastening plate goes onto the bottom of the hardware to help keep the strips from being scored by movement back and forth.
5. After the strip door is assembled the strips can be trimmed to leave 1/4" of clearance from the floor surface. Your PVC strip door material can be cut using a utility knife. Please allow the door to hang for 1 to 2 days before making a final trim to allow for proper alignment.
